The Grok Automation Map

Four steps to turn one repetitive task into a system that runs on its own, with **Grok** and **Grok Bot**. SI = Super Intelligence. Start small: one task, one workflow, one week.

1 PLAN

Pick the one task worth automating first.

- ◆ List what you repeat every week: posts, replies, reports, research, invoices.
- ◆ Choose the one with clear inputs, a clear output and a clear "done".
- ◆ Write the job in one paragraph: trigger, steps, output, who approves.

Example: "Every morning, read today's top news in my niche, pick one story, and draft a 60-second script with sources."

2 CONNECT

Give Grok the tools and the context.

- ◆ Connect only the apps the job needs (email, calendar, drive, X) and nothing more.
- ◆ Save your rules once: brand colors, tone, words you never use, prices.
- ◆ Keep a simple log file so every run reads what happened before.

Example: a style file with "navy/gold/cyan, always say SI, max 5 hashtags" that every run reads first.

3 AUTOMATE

Schedule it, then make it prove the work.

- ◆ Turn the job into a scheduled routine on Grok Bot (daily, weekly, on new email).
- ◆ Add a quality check before anything goes out: facts, spelling, format.
- ◆ Keep a human approval step for anything public, paid or sent to people.

Example: a 09:00 routine drafts the post, checks it against your rules and sends it to you for one-tap approval.

4 SCALE

Chain routines into one system.

- ◆ Link outputs to inputs: research → script → visual → post → report.
- ◆ Use Grok Imagine for images and video, and the Grok API inside your own app.
- ◆ Review weekly: keep what saved time, cut what didn't, add the next task.

Example: one weekly routine pulls your post stats into a short report with the top 3 things to change.

PROOF: THIS ACCOUNT RUNS ON THIS MAP

News scan → Script + sources → 3D render → Voice-over → QA: frame every 0.5 s →
Post on Instagram + X → App update

Every day, the Monsieur SI World Brief and SI × Crypto reels are produced by a system of scheduled routines like this one. Messages and anything new still wait for human approval.

Start with one task

One working routine beats ten half-built ones.

Check before it ships

Every output passes a written checklist first.

You stay in control

Public posts, payments and DMs keep an approval step.
